Caves with permanent freshwater pools (approximate locations of caves that intersect the water table)

This map shows the caves in northern Guam whose location and vertical extent is such that they intersect the water table and, as a result, contain permanent pools of fresh or brackish water. The geospatial data used in this map are derived from a wider coverage of caves of Guam, based on Taboroši, D. (2002), Karst features of Guam [MSc thesis], University of Guam, Mangilao, 324 pp. The indicated locations of caves are approximate.
